

Aditya Anupam Shukla . Jarvis Consulting

Results-driven Business Analyst & Customer Support Professional with 2.5 years experience in Data management, customer service, and IT support. Skilled in driving revenue growth, optimizing sales operations, and enhancing customer experience. Proven ability to analyze KPIs, manage CRM systems (Salesforce, ServiceNow), and streamline workflows for operational efficiency. Strong leadership experience in training teams, managing escalations, and implementing strategic sales plans. Adept at troubleshooting technical issues, process automation, and market research to support business success. Seeking opportunities to leverage technical expertise, sales acumen, and customer support skills in a dynamic environment.

Skills

Proficient: Requirement elicitation, Business Process Analysis, Communication, Collaboration, Stakeholder Management, Agile/Scrum, Documentation

Competent: SQL, Power BI, Microsoft Excel, Microsoft Visio, Confluence, Jira, Git, Salesforce, Figma

Familiar: Python, ServiceNow, C++, JAVA, OOP

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_AdityaShukla/tree/develop

Cluster Monitor [GitHub]: The Linux Cluster Monitoring Agent is a Bash-scripted MVP designed to help the Linux Cluster Administration team at Jarvis automate server monitoring. It collects hardware specs and real-time resource usage data from Linux nodes, storing it in a PostgreSQL database running in a Docker container. Scripts (host_info.sh and host_usage.sh) capture static and dynamic data, respectively, with host_usage.sh running every minute via crontab. The system supports automated data logging, centralized storage, and performance analysis, significantly reducing manual monitoring. Git and Docker were used for version control and containerized deployment, ensuring portability and maintainability.

RDBMS_SQL [GitHub]: A SQL-based project designed to manage a country club's data, including members, facilities, and booking history. The system supports core database operations such as inserting records, removing members, updating facility costs, analyzing monthly bookings, and identifying popular facilities.

BSA Project [GitHub]: A hands-on project focused on requirements gathering, system analysis, and documentation. I developed a Business Requirements Document (BRD) for a Linux Cluster Monitoring Agent, outlining business needs, technical specifications, and implementation strategy using PostgreSQL, Docker, and Bash scripting. Additionally, I created a System Requirements Document (SRD) for a mobile-first Retail Investor Stock Trading Application, detailing functional and non-functional requirements, user needs, and compliance standards. This project strengthened my skills in stakeholder communication, Agile methodology, SQL, and end-to-end documentation aligned with industry practices.

Python Data Analytics [GitHub]: Not Started

Highlighted Projects

IIBA Toronto GTA Chapter: Supported the launch of a new IIBA chapter in GTA by analyzing business processes, creating requirement documents, and delivering data insights using SQL and Power BI, which improved operations by 30%. Facilitated stakeholder workshops and assisted in technology implementations to ensure alignment with business goals and compliance standard

Smart Buss App: Researched and implemented an IoT-based system using Raspberry Pi and RFID scanners to monitor passenger counts on National University of Singapore (NUS) campus buses. Collected and analyzed data from RFID inputs to determine bus occupancy trends, enabling data-driven recommendations for optimizing the number of buses deployed on specific routes. Integrated GPS data and weather information to study external factors affecting travel time and schedule disruptions. The insights supported more efficient route planning and resource allocation within the campus transport system.

Professional Experiences

Business Analyst, Jarvis (April 2025-present): As a Business Analyst, I work closely with cross-functional internal teams to gather requirements, analyze system processes, and support the delivery of scalable solutions using technologies

such as Linux, Bash scripting, PostgreSQL, Docker, and Git. I translate business needs into clear technical documentation and support system design and implementation to enhance operational efficiency. Operating within an Agile/Scrum environment, I actively participate in sprint planning, daily stand-ups, reviews, and retrospectives to ensure team alignment and continuous process improvement.

Business Analyst, Ace Management (September 2024 - March 2025): Analyzed the existing business and sales operations workflows to identify inefficiencies and improvement opportunities. I documented these workflows using BPMN diagrams, which helped visualize and isolate key bottlenecks affecting performance and documentation consistency. In collaboration with Managers and Business Analysts, I developed a streamlined Rogers sales program, supported by standardized sales record templates and documentation rules to ensure operational consistency. To enable smooth rollout and training, I created user stories, use cases, and process documentation for Business Developers (BDs), along with a structured post-sales engagement guide focused on improving customer retention through defined follow-up steps. Using Salesforce CRM, I tracked KPIs such as daily outreach, presentation volume, and conversion rate to assess performance and recommend targeted coaching modules. I also analyzed pricing trends and competitor data to support real-time pricing requests, giving us a competitive edge. These efforts enabled each BDA to consistently achieve 50 daily interactions, 4 product presentations, and 12 sales, generating weekly team revenue of \$4,000-\$5,000 and monthly revenue between \$16,000-\$20,000, based on team size and product value.

Business Analyst, Mozwebmedia (April 2021 - September 2022): At MozwebMedia, I collaborated with business owners to define goals for expanding their digital presence through website and app development. I analyzed user experience issues using customer journey mapping and feedback to identify pain points in navigation and design. To address scalability, I worked with developers to assess system architecture and data flow, ensuring performance aligned with growth plans. I conducted stakeholder interviews and process walkthroughs to map workflows, then used BPMN diagrams to highlight bottlenecks and inefficiencies. Based on these findings, I created Business Requirement Documents (BRDs), System Requirement Documents (SRDs), user stories, use cases, and user flow diagrams to guide development and ensure alignment across marketing, design, and engineering teams. Operating in an Agile environment, I participated in sprint planning, daily stand-ups, sprint reviews, and retrospectives to maintain visibility and adaptability. I managed scope changes by conducting impact analysis, updating requirements, and coordinating with cross-functional teams to ensure smooth delivery. I also prepared training materials to support onboarding and ensure process clarity for internal teams and clients. This structured approach improved team collaboration, reduced development cycles, and ensured consistent delivery aligned with client expectations.

Education

George Brown College (2023-2024), Postgrad Diploma in Health Informatics, Computer Technology - Dean's Honour List: - GPA: 3.7/4.0

George Brown College (2022-2023), Postgrad Diploma in Information System Business Analysis, Computer Technology - College Process Improvement Research - GPA: 3.49/4.0

Manipal University Jaipur (2017-2021), Bachelor of Technology in Information Technology, Electrical and Computer Engineering - Nonprofit Business Initiative to Support Locally Produced Natural Product - Team Lead for Cultural Event Organization Team

Miscellaneous

- IIBA - ECBA Certified Business Analyst
- Worked as a Cook Supervisor in the kitchen department at Farm Boy for 2 years while studying at George Brown College, managing operations and training staff in a fast-paced environment.
- Every weekend, I take some time out to play Age of Empires II, playing this game since I was in 7th grade, which has sharpened my strategic thinking, resource management, and real-time decision-making skills that continue to influence how I approach problem-solving.
